RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 70 pages. OCLC Number: (OCoLC)55008940 Subject: Streamflow -- Florida -- Everglades National Park -- Computer simulation. Excerpt: . . . One key model now being applied to the SICS substantially improve the reliability of information available for resource management decision making in and other southern Florida areas is the Across Trophic support of Everglades restoration. Level Systems Simulation ( ATLSS ) model ( Deangelis, 2000 ). The ATLSS model is used to compare the rela-tive effects of differences between alternative hydro-logic scenarios on several key indicator species APPROACH ( alligator, snail kite, Florida panther, white-tailed deer, The approach for this study included selection, and Cape Sable seaside sparrow ) within the ecosystem enhancement, and application of a numerical model using linked species models. The ATLSS model capable of simulating flow and solute transport within requires very detailed and accurate water-level, flow, the SICS area and into Florida Bay. Data were obtained and salinity information from a hydrologic model in from several sources to apply, calibrate, and test the order to simulate realistic population changes for these model. Additionally, results from ongoing or recently species in response to restoration...
