

## Solvatochromism, Molecular & ionic Recognition: Photophysical Aspect

Filesize: 3.24 MB

### ***Reviews***

*The publication is not difficult in go through better to comprehend. I could comprehended everything using this created e publication. Its been designed in an exceptionally easy way in fact it is merely soon after i finished reading through this ebook by which basically transformed me, modify the way i really believe.*

## SOLVATOCHROMISM, MOLECULAR & IONIC RECOGNITION: PHOTOPHYSICAL ASPECT

DOWNLOAD

LAP Lambert Academic Publishing Feb 2013, 2013. Taschenbuch. Book Condition: Neu. 221x151x15 mm. Neuware - This book deals with a systematic study of (i) Solvation effect in neat solvents, (ii) Supramolecular interaction with fullerenes and (iii) EDA interaction with metal ions involving four different classes of fluorescent probes viz., saturated b-diketones (dk) dye I, boron diketonate complexes (bf) dye II, pyrromethene laser dyes (PM) dye III and meso-tetraphenylporphyrins (TP) dye IV. Density based theoretical (DFT) calculations of some photophysical parameters for the dye systems were attempted for providing justification in support of host guest or donor acceptor type of interaction and the corresponding energies have been calculated, together with molecular orbital and electron density mappings to locate the probable sites of interaction. The rationale behind undertaking the work has been to explore the role of fluorescence probes in terms of the three above mentioned ways of weak interaction. 140 pp. Englisch.
