RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 420 pages. Original publisher: Gaithersburg, MD : U. S. Dept. of Commerce, National Institute of Standards and Technology, 2007 OCLC Number: (OCoLC)714139940 Subject: Fire -- Mathematical models. Excerpt: . . . 1 REI 4714 A Computational Model For Fire Growth and Spread On Thermoplastic Objects 1. BACKGROUND 1. 1 Introduction This report describes the work effort by Reaction Engineering International (REI) to develop, demonstrate and deliver to the National Institute of Standards and Technology (NIST) a condensed phase computational fluid dynamics (CFD) based tool to model the processes of melting, flow and gasification of thermoplastic materials exposed to a high heat flux. This work effort is in response to NIST solicitation PWS SB1341-05-C-0041. Potential applications of the tool include investigating the behavior of polymer materials commonly used in personal computers and computer monitors if exposed to an intense heat flux, such as occurs during a fire The condensed phase CFD (CPCFD) model delivered to NIST is based on a time dependent (time varying) grid CFD method. The time dependent grid CFD model provides a rigorous approach, enabling detailed studies of the melting and melt flow processes for thermoplastic materials. The model was developed by re-using portions of an existing CFD tool and enhancing it with sub-models required to address the specific needs of modeling thermoplastic flows. The time integration, spatial discretization and overall solution procedure are based on standard CFD methods from the literature. CPCFD is written in FORTRAN 90 in an object-oriented form. A 3D, finite volume, multi-block body-fitted time dependent (time varying) grid formulation is used to solve the unsteady Navier Stokes equations. A multi-grid method is used to accelerate convergence at each time...
