Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Identifying Rank-Influential Groups of Observations in Linear Regression Modeling When fitting a linear regression model, deleting a group of observations from the data may decrease the precision of parameter estimates substantially or, worse, render some parameters inestimable. These effects occur when the deletion of the group degrades the rank of the model matrix for the regression. We present theory and methods for identifying such rank-influential groups of observations. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
